Ventis™ MX4 Receives GOST-R and GOST-K Approvals

Industrial Scientific is pleased to announce that the Ventis™ MX4 multi-gas monitor has received the GOST-R and GOST-K approvals for intrinsic safety in Zone 1 applications (marking - PBEExdI X / 1ExdIIC1T4 X). These approvals ensure the instrument meets the standards set by Russia (GOST-R) and Kazakhstan (GOST-K).

The lightweight and highly configurable Ventis is capable of detecting from one to four gases including oxygen, combustible gases (LEL or CH4) and any two of the following toxic gases: CO, H2S, NO2 and SO2. Ideal for confined space monitoring and/or continuous personal monitoring in potentially hazardous environments, the instrument is designed to keep workers safe in a variety of industries. In confined space applications, the Ventis can be used to draw samples from up to 30 meters (100 feet) with the integral pump.

Ventis users can choose from a wide range of sensors, batteries, chargers and more. Among the battery options is an extended range lithium-ion battery which enables up to 20 hours of uninterrupted personal monitoring when used with the non-pumped version. Overmold color options are also available, including either black or safety orange for increased visibility. Most important, the Ventis is compatible with iNet®, Industrial Scientific’s unique Gas Detection as a Service solution.
