RoHS Compliance Update

Effective immediately, Industrial Scientific will be manufacturing all products in compliance with the European Union Directive 2011/65/EU Restriction of Hazardous Substances (RoHS) Standard. The RoHS directive restricts the use of certain hazardous substances in electronic equipment shipped to member countries. The substances include lead (Pb), cadmium (Cd), mercury (Hg), hexavalent chromium (Hex-Cr), polybrominated biphenyls (PBB), and polybrominated diphenyl ethers (PBDE).

The goal of RoHS is to reduce the impact of global consumer electronic waste. Each of the prohibited chemicals has been shown to have negative health effects on humans through direct contact, even at low exposure levels, and when electronics containing the chemicals are discarded. Industrial Scientific is dedicated to preserving human life. Thus, the company is fully committed to protecting the environment and reducing exposure to hazardous chemicals.

While the restriction applies only to products shipped to European Union member countries, Industrial Scientific has implemented compliance policies for all products regardless of the destination. However, a limited number of components for which no RoHS-compliant substitution exists which will continue to be used under exemptions. Additionally, limited quantities of accessories inventory may not be compliant. Please contact Industrial Scientific to verify the RoHS status of any particular component or instrument configuration.
