Recycling of Aluminum Calibration Gas Cylinders

A recent change to an all-aluminum valve on the Industrial Scientific 34 liter and 58 liter aluminum calibration gas cylinders now makes these aluminum cylinders **100% recyclable**. The change eliminates the previous need to remove the brass valve prior to recycling. All recyclable aluminum cylinders will now display the recycle symbol shown below on the cylinder label.

Compressed gas cylinders can pose a serious danger if placed in a dumpster for disposal or sent for recycling with pressure remaining in the cylinder. In order to eliminate this danger, **a recycle tool is available to remove the cylinder valve stem** and relieve any remaining gas pressure from the bottle. This procedure is very easy to perform and takes only a few seconds. Two distinct tools are available.

**ISC Part number** | **Description**
--- | ---
17113275 | Recycle Tool for 34 L and 58 L aluminum cylinders and 103 L steel cylinders
17113283 | Recycle Tool for 34 L blue (formerly red) steel cylinders
