**Ventis™ MX4 to Standardize on Torx T10 screws**

Industrial Scientific is continually working to improve the quality and lead times on our portable gas monitors and accessories. We have identified an opportunity to improve in both of these areas by standardizing the Ventis MX4 monitor with Torx T10 screws.

While the majority of our Ventis MX4 monitors are currently shipped with Phillips-head screws, we provide Torx T10 screws for Mine Safety and Health Administration (MSHA) and Australia and New Zealand (ANZEx) approvals. Over time, we have seen that the Torx T10 screws show improved durability over Phillips-head screws. Further, standardizing on the Torx T10 screw improves lead times for our customers through increased manufacturing efficiencies.

By the end of January 2016, all Ventis MX4 monitors and parts (including pumps, pump doors, and replacement battery packs) will ship with Torx T10 screws. A Torx T10 screwdriver will be included with each new Ventis MX4 monitor sold.

For additional information on this change, contact your local Industrial Scientific representative. Contact information can be found at [www.indsci.com/offices](http://www.indsci.com/offices).

Sincerely,
