Tango Version 1.7 Battery Change Procedures

In Tango firmware version 1.7, the process for changing a battery has been improved to minimize the possibility of the low battery state not clearing on a complete discharge.

Tango version 1.7 now clears its low battery flag when the battery is removed and the on/off button is depressed for two seconds before inserting the new battery. This makes battery changes faster by eliminating the need to wait for the supercap to drain.

Step 1
Lift the battery up from its cradle. Dispose of according to company policy.

Step 2
The instrument’s interior power button is located below the battery cradle and to the left of the speaker (see arrow above). Press and hold this button for two seconds, then release it.

Step 3
Orient the replacement battery so the positive and negative ends align with the "+" and "−" cradle markings, respectively. Place the new battery into the cradle negative end first. Press down on the battery to secure it in the cradle.

Following these steps will result in a quick and trouble-free battery exchange. For additional information, visit our website at www.indsci.com or contact your local Industrial Scientific representative. Global contact information can be found at www.indsci.com/offices.

Sincerely,

Bradley J. Day
Global Product Manager for Docking Stations and Accessories

OUR MISSION
Preserving human life on, above and below the earth.
Delivering highest quality, best customer service … every transaction, every time.
