

# MX6 iBRID MULTI-GAS MONITOR

The MX6 iBrid® is more than an intelligent hybrid of Industrial Scientific's best monitoring technologies—it's the most adaptable six-gas monitor on the market. The MX6 iBrid uses five sensor slots to detect up to six gases. Each of those slots accepts a variety of sensors, which means you can use the instrument with a PID sensor one day and an infrared sensor the next. Settings allow you to adapt the instrument's behavior based on your application.

- Personal or confined space monitoring
- 1-6 gas monitor
- Full-Color LCD Display
- 24 sensor options including PID and IR
- O<sub>2</sub> sensor – 6 months old or newer
- Ideal for Electrical/Gas Utilities, Steel Production, Oil & Gas, Chemical, Fire Services, Mining, and Water/Waste Water Treatment
