

Industrial Scientific Introduces New Sensors and Languages for Ventis™ Pro Series Gas Monitors
Updates to the Ventis Pro Series make it accessible for a broader range of users and applications.

PITTSBURGH, PA – 2 February 2017 – [Industrial Scientific](http://www.indsci.com), the global leader in gas detection, is pleased to announce that firmware version 2.1 for Ventis™ Pro Series Multi-Gas Monitors is now available and offers support for additional sensor and language options. Ventis Pro Series monitors, first introduced in April 2016, are small, highly configurable instruments offering LENS™ Wireless and the industry's only Guaranteed for Life™ warranty.

New sensors for the Ventis Pro Series include a dual-range methane IR sensor, a phosphine sensor, and a long-life oxygen sensor. The dual-range methane IR sensor is ideal for use in inert atmospheres and for seal checks, leak detection, and when high concentrations of gas would otherwise damage a catalytic bead LEL sensor. The sensor range is 0-100% volume methane with 0.01% resolution from 0-5% volume and 0.1% resolution from 5-100% volume. The phosphine sensor is commonly required for agricultural and food & beverage industry applications. The long-life oxygen sensor is suitable for most industries and is designed to perform in the field for three to five years.

With firmware version 2.1, Ventis Pro Series instruments are now accessible for more global users with the addition of Italian, Dutch, Portuguese, and Polish documentation and instrument interfaces. The Ventis Pro also supports English, French, Spanish, and German.
